What's unique about them?	Why are you interested in this company?
I like that they have an additional few months of training prior to working with clients to make sure you have the right skills	I have heard such wonderful things about this company
Their culture is unique according to people I have spoke with. They are very personal and treat eachother like family.	I am extremely interested in their work culture.
Looks like they are a small office, only 50 employees spread out across the world.	I am used to smaller companies, I enjoy them a lot
Most people I know have at some point worked for Micron which I find pretty awesome	My stepdad worked there for over 30 years, and loved it.
They love taking on tough challenges, disrupting the status quo, and creating what's next.	The are a large company with great benefits that have been around for a long time
Orion has been building and maintaining software for the National Weather Service which include geospatially driven websites, backend applications capable of processing near real-time hydrologic data and creating solutions to aid emergency management and the general public in critical decision making	They are remote, but also I think it is so cool that they aid in emergency management and the National Weather Service
They treat their employees so well, and they are currently leading in the industry	My brother just got a job there, and I have heard the most wonderful things about the benefits they give their employees
They have the coolest atmosphere and their benefits are phenomenal	I would love to work for them. It's a fullstack position which is what I'm very interested in. The pay is also very nice!
What makes them unique is that most of the companies I have been looking at are specifically tech companies and this is not.	My father-in-law works there and loves it! I would love to be a part of that environment.
